## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 7-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Mossi et al (U.S. 6,032,979).

Mossi et al discloses a gas generator with the following: a short cylindrical housing (12), wherein an airtight space in the housing (12) is partitioned into a plurality of combustion chambers (34, 74, 102), a gas generating agent (36, 86, 60) for generating a high temperature gas when it burns is loaded in each of the combustion chambers (34, 74, 102); a plurality of squibs (62, 90) for individually firing and burning the gas generating agents (60, 86) in the respective combustion chambers (74, 102) are mounted in the housing (12), wherein the squibs (62, 90) are disposed eccentrically to an axis of the housing (12), and flames of the eccentric squibs (62, 90) are controlled to spout around the axis of the housing (12); wherein the squibs (62, 90) are covered with firing lids (56, 96) formed with a plurality of firing holes (76, 104).

### ***Response to Arguments***

3. Applicant's arguments filed July 16, 2003 have been fully considered but they are not persuasive. The prior art still read on the claimed limitations.

In response to applicant's argument that Mossi et al disclose the flowing direction of gas is radially toward the outside in stead of around an axis of the housing as recited in independent claims 7 and 8, the examiner respectfully disagrees because the claims are broadly recited "the frame... spout around said axis of said housing", in this case, as best seen in figures 2 of Mossi et al, the examiner considers that a vertical center line, which is parallel to the side wall 22 and along the center of the squib 90, corresponds to the axis of the housing as claimed in the instant application. Therefore, the flowing direction of gas indicated by arrows B is considered to be around the center line of the squib 90, in other words, the flowing direction of gas is around the axis of the housing.

#### ***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

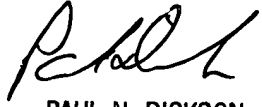

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
